

PLANTER TABLE- #1247T

Quality Western Red Cedar with Handcrafted Construction

Assembly Instructions: All holes are pre-drilled and screws are included. Check all packing material carefully before discarding as shortages of parts may occur from parts left in packaging. Read instructions carefully before beginning to assemble your PLANTER TABLE.

Tools Required for Assembly: #2 Phillips screwdriver or an electric screwdriver with a #2 Phillips head bit

PARTS LIST:

1 Table Top

2 Legs

1 Center Leg Brace

8- 2" Screws & 4- 3" Screws

ASSEMBLY:

NOTE: This assembly is best executed with two people.

STEP 1: Position the two legs approximately the length apart as the center leg brace. Attach the Center Leg Brace to the first leg with 2- 3" screws through the pre-drilled holes. Position the other leg in the same way and repeat the process.

Note: The horizontal 2x4's attached to the legs go to the **INSIDE**.

STEP 2: With the center brace attached to both legs, lay the leg bottoms on a flat surface. Position the **TOP** on top of the legs with the center of the legs to the center of the top. Attach the **TOP** to the **LEGS** using 8- 2" screws through the pre-drilled holes.

Note: Western Red Cedar contains natural preservatives, so it resists rot, and weathers well. These qualities make cedar ideal for outdoor use. A quality sealer or stain on all areas will delay the graying of the wood and give additional protection. Cedar will weather to a silvery gray if left in its natural state. We would recommend a location for your garden planter that will receive full sun light. Ordinary soil is too heavy for container gardening and we would recommend a light pre-mixed soil.
